BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

Action		
Code	Meaning	Comments
/a	Commit to send an ACK packet as a copyback by appending an entry for the received foreign packet in a copyback list. Set copy tag to I.	ACK packet may be sent from any state that allows copyback packets to be sent. It must be sent within a finite time of first entering such a state, regardless of
ci	Commit to send DATA and/or ACK packets for all outstanding copybacks for this cache line. Next, set copy tag to W. Then, perform state transition based on current state & local packet being received.	what other packets have been received. If sending copybacks changes the state from a state X to a state Y, the local packet being received will be received in state Y (and as a result, the entry for state Y in the table must be consulted to determine the state transition caused by receiving the local packet).
/d	Commit to send DATA packet for local RTWB, WS, WB, or WBS transaction. DATA packet is sent in response to receiving a PRN packet for this transaction.	DATA packet may not be sent until a PRN packet is received. It must be sent within finite time of receiving the PRN packet & having entered a state that permits the packet to be sent, regardless of what other packets have been received.
el	Clear outstanding copyback commitments for this line by removing them from the copyback list. Do not send DATA or ACK packets for entries that were on the copyback list. Next, perform state transition based on current state & local packet being received.	This action code is used in response to receiving an ERR or ERRL packet. If an ERR packet was received in place of a PR or PRACK packet, or if an ERRL packet was received in place of a DATAP packet, a DATA packet may be sent to the error device.
/i	Commit to send a DATA packet as a copyback by appending an entry for the received foreign packet in the copyback list. Set copy tag to I.	DATA packet may be sent from any state that allows copyback packets to be sent. It must be sent within finite time of first entering such a state, regardless of what other packets have been received.
/j	! Set write tag to I.	Max odie: packets flave been feceived.
/n	Commit to send NACK packet for local WE or WBS transaction & set write tag to W. NACK packet is sent in response to receiving a PRN packet for this transaction.	NACK packet may be sent at any time after receiving the PRN packet. It must be sent within finite time of receiving the PRN packet, regardless of what other packets have been received.
/r	Commit to send a DATA packet as a copyback by appending an entry for the received foreign packet in the copyback list. If copy tag is W, set copy tag to R,	DATA packet may be sent from any state that allows copyback packets to be sent. It must be sent within finite time of first entering such a state, regardless of what other packets have been received.
/s /w	Set write tag to R.	
	Commit to send a DATA packet as a copyback by appending an entry for the received foreign packet in the copyback list.	DATA packet may be sent from any state that allows copyback packets to be sent. It must be sent within finite time of first entering such a state, regardless of what other backets have been received.
/y	if copy tag is R, set copy tag to I.	Used to record invalidating transactions while a copyback for a foreign memory remap is pending.
12	If write tag is R, set write tag to I.	Used to record invalidating transactions while a local WES transaction is pending.

gTag	Description
gM	The maximum access right within the node is Write Access
gS	The maximum access right within the node is Read Access. No client device in the node can have Write Access.
gl	The maximum access right within the node is Invalid Access. No client device in the node can have Read or Write Access.

Packet		Address Sp	ace	
Туре	Full Name	Cacheable	1/0	Description
PRTS	Proxy RTS	Y		Request from an interface in a gS or gI node in response to an RTS request from another node
PRTSM	Proxy RTS Modified	Y		Request from an interface in a gM node in response to an RTS request from another node
PRTOM	Proxy RTO Modified	Υ		Request from an interface in a gM node in response to an RTO request from another node
PRTO	Proxy ReadToOwn	Υ		Request from an interface in response to an RTO regest from another node
PU	Proxy Upgrade	Υ		Request from an interface asking memory to supply data for an outstanding RTO
PDU	ProxyDataUpgrade	Υ .		Request from an interface asking memory to update gTag to gM; interface supplies data for an outstanding RTO
PRSM	Proxy ReadStream Modified	Υ .		Request from an interface in a gM node in response to RS request from another node
PIM	Proxylnvalidate Modified	Υ .		Request from an interface in a gM node to invalidate data in caches and memory
PI ·	ProxyInvalidate	Υ	4.35	Request from an interface in a gS or gl node to invalidate data in caches and memory
PMR	ProxyMemoryRead	Y		Request from an interface to memory to read coherency state(s) and data or meta-data
PMW	ProxyMemoryWrite	Y		Request from an interface to memory to write coherency state(s) and data or meta-data

Fig. 22

Packet Type	Full Name	Description
DATAM	Data-Meta	Data packet containing data and coherence state information
DATAN	Data-NoPull	Data packet sent in response to PRTSM indicating no PRN will be coming
REP	Report	Report from memory to an interface indicating a transaction to be handled by the interface

Fig. 23

Subtransaction	Preexisting Global Access State	New Global Access State
PRTSM	Modified .	Shared
PRTOM	Modified	Invalid
PRTO	Shared, Invalid	Invalid
PU	Shared	Modified
PDU	Shared, Invalid, Modified	Modified
PRSM	Modified	Unchanged
PIM	Modified	Invalid
PI	Shared, Invalid	Invalid
PMR	Shared, Invalid, Modified	Unchanged
PMW	Shared, Invalid, Modified	Equal to new global access state specified in DATAM packet

Response info	gTag	Home Memory Subsystem Action
No	gM	EC Mode Allow owning device to respond. PTP Mode Forward response to owning device
No	gS	Send REP packet to interface if write access requested
No	gl	Send REP packet to interface
Yes	gM	Respond with copy of the requested coherency unit

Fig. 35

Response Info	Memory Subsystem's Action
mΝ	Does not respond with copy of coherency unit because a cache within the node owns the coherency unit
mR	Does respond because memory is the owner
mS	Does respond to requests for shared access because memory has shared copy and no active device has ownership; does not respond to requests for write access
ml	Does not respond because memory's copy is invalid

Fig. 36
